Pigeon Trap 36″x16″x8″

New and improved design with input from wildlife specialists. Fully assembled and ready to use, this trap can hold 15 or more pigeons at one time. It is 36"L x 16"W x 8"H, weighs 7 pounds and is constructed of 1" x 1" - 14 gauge galvanized steel wire mesh. Use on a flat and level surfaces. This trap has two one-way doors that allow pigeons to enter but not to exit. A large access door on top makes bird removal easy. Provide a small water source along with the appropriate bait.

#TH502.5R - Pigeon Trap
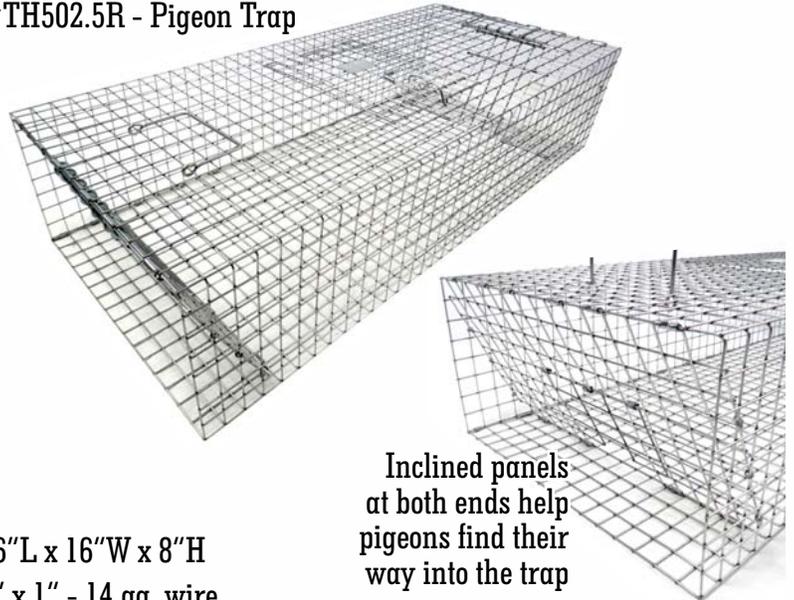

36″L x 16″W x 8″H
1″ x 1″ - 14 ga. wire

Inclined panels at both ends help pigeons find their way into the trap

Basic Trapping Guidelines

Pre-bait the problem area for several days before placing the trap. Position the trap down flat with the trap doors facing out to clear approaches. To acclimate the birds to the trap, wire the doors open and place feed on top and inside the trap. Once birds are acclimated to area and the trap, release the doors to capture the birds. Inspect traps every day to remove trapped birds and to add bait and water as needed. If trapping in direct sunlight, you can create shade by partially or fully covering the trap with a weather resistant material. Do not leave birds in the trap for long periods of time. Be sure to clean the trap between settings.

IMPORTANT NOTE: Having the best trapping equipment does not guarantee trapping success. Bird and animal trapping can be as much art as it is science and you might not catch anything. Effective trapping takes planning, a knowledge of the target species, the correct bait, trap location and more.
